

PNEUMATIC UNDERRUN BAR

Often it is **no longer allowed for the driver to get out of his vehicle on the unloading area**. The pneumatic bumper certainly is a handy tool in such cases.

AGRO

✓ U-Rockstar

There are three possible modes of operation:

- 1 using the button in the cabin
- 2 using the switch on the console

- 3 automatically using the control paddle when tipping

ADVANTAGES

- The bumper no longer needs to be folded up by the driver. After removing the safety pin, **the bumper automatically folds up and down**.

- The underrun bar (and the mud flap) **does not hang down in the material during unloading**.

- The driver can lift up the underrun bar, which **allows tipping over concrete blocks**, etc.
